

NEW PRODUCT RELEASE

Toronto, November 2008

New Hoods for Multipole Connectors designed for Flat/Festoon Cable

ITC now stocks a new line of metal hoods for their multi-pole connectors by ILME®, specially designed to accommodate and seal flat multi-conductor cables. The top-entry hoods “size 24” (for 24 -pole screw connectors, or for higher number of crimp contacts) are equipped with a unique screw-down strain relief device, into which is set a separately purchased rubber seal to accommodate the cable. Different models of these seals are available for varying sizes of flat cable, as is a solid seal that can be custom modified by the customer.

The ILME® line, distributed in Canada by ITC, includes an ample range of high quality multipole connectors and accessories, from 3 to 212 poles and up to 100A, CSA certified and UL recognized. ITC stocks all these components in Toronto.

Contact ITC for a data sheet covering these new product offerings.
