

NEW PRODUCT RELEASE

Toronto, August 2008

JEI Series Inserts for Multipole Connectors Offer Cost Savings

ILME has a new offering in their ever-expanding line of multipole connectors designed to save money for OEMs.

The 'JEI' series inserts are less feature-laden models designed to compete with similar styles from most other brands of rectangular connectors. They have been tested to withstand up to 200 open/close cycles, and mate with all other standard inserts. The contacts are tin plated and the inserts have basic wire entry featuring wire protection tabs. All models have CSA, UL and CE approvals.

Offering a cost savings of up to 15%, they are now available from stock at ITC.

Contact ITC for a data sheet covering these new product offerings.
