

## NEW PRODUCT RELEASE

Toronto, March 2009

### New round KEL-DPZ models with threaded mounting collars from Icotek®

Icotek® has recently added new versions of the innovative KEL-DPZ cable entry frames to its offering. Previously available only in screw-mount rectangular models, the DPZ line is now available in round models that are fastened to the panel by means of a locknut, or directly into a threaded hub. This enables fast assembly, from knockout of the round hole in the panel, through to the fastening of the frame itself.

The KEL-DPZ cable entry frame is a cost-saving alternative to conventional cable glands. With an IP rating of 65, these frames increase the density of non-terminated wire and cable entry into the panel, without sacrificing ingress protection. The round M32, M50 or M63 cut-outs can be quickly punched by conventional means, and cables can be passed through the membrane of the frame and into the panel in seconds.

Samples of these frames, and other innovative cable management and EMC solutions are available from stock at Icotek's Exclusive Canadian Representative, ITC.

Contact ITC for further information, or request a data sheet covering these new product offerings.
