

## NEW PRODUCT RELEASE

Toronto, March 2009

### Monobloc LED Pilot Lights in five colours and 3 voltages

The new line of 22.5mm “Monobloc” panel indicator LED Pilot lights recently introduced by ITC combines the convenience of single-component (no separate part numbers to order, only one piece to install) with long life (more than 30,000 hours), low power consumption and high visibility of modern LEDs. They are available from stock in your choice of five colours, for 12V, 24V (AC/DC) or 110V (AC/DC). All models are cULus certified.

Contact ITC for a data sheet covering these new product offerings.
