

## NEW PRODUCT RELEASE

Toronto, March 2009

### New Push Button Series increases flexibility and reduces stock

ITC has just added a new series of flush mount spring return non-illuminated actuators to its comprehensive line of metal 22mm push buttons. These new buttons are mounted in the same way, but are provided without a colour plate on their face. One then simply snaps-in the preferred colour plate into the front of the button, from a choice of white, black, green, red, yellow or blue.

This can now help in reducing the value and size of stock by carrying the actuators in bulk, and the less expensive plates in the variety of available colours.

These innovative products are now available from stock at ITC in Toronto.

Contact ITC for a data sheet covering these new product offerings.
