## Safety Limit Switches with rope

APPROVALS: UL 508 / CSA C22-2 N. 14
(Ec) EHL (CCC)

## HOW IS IT MADE?

01 Casing

- SM with dimensions acc. to EN 50047

02 Mounting the casing

- 2 x M4 screws on top part for SM series
- 2 or $4 \times$ M4 screws on top part for SDM series

03 Contact Block

- Positive opening operation
- Slow action contacts
- Contacts are electrically separated

04 Connecting terminals

- Block of 2 contacts: M3.5 (+, -) pozidriv 2 screws
- Block of 3 contacts: M3 (+,-) screws
- Screw head with captive cable clamp
- Markings conform with IEC 60947-1, IEC 60947-5-1 standard

05 Operating heads

- Streight
- $90^{\circ}$ right
- $90^{\circ}$ left

06 Reset

- Manual reset button for emergency stop

07 Cover

- 3 screws 3 pozidriv 1 for SM series
- 4 screws 3 pozidriv 1 for SDM series

08 Electrical connection

- $1 x$ threaded cable inlet suitable for cable gland (SM)
- $3 x$ threaded cable inlets suitable for cable gland (SDM)
- 1 x M12 connector for pre-wired solutions (SM)

## Safety Limit Switches with rope - Description

## APPLICATIONS

Easy to use, the limit switches for safety applications with rope for simple and emergency stop offer specific qualities:

- Capability for strong current switching (conventional thermal current 10 A ).
- Contact blocks with positive opening operation of the "N.C." normally closed contact(s) (symbol $\Theta$ ).
- Electrically separated contacts.
- Precision on operating positions (consistency).
- Immunity to electromagnetic disturbances.

The use of the Comepi pull wire safety switches allows you to create perimeter protections of the machines, thus reducing the need to install sever emergency stop stations in different points of the machine. They comply with the requirements of European Directives (Low Voltage and Machines Directive) and are conform to European and international standards.
DESCRIPTION
SM/SDM series are made of zinc alloy (zamack). All metal limit switches have a degree of protection IP66.

## Safety Limit Switches with rope - Technical Data

## AC-15 - Snap action

AC-15 - Slow action

| DC-13 | Snap action | Slow action |  |
| :--- | ---: | :---: | :---: |
|  |  | Power breaking for a durability <br> of 5 million operating cycles |  |
| Voltage | 24 V | 9.5 W | 12 W |
| Voltage | 48 V | 6.8 W | 9 W |

They comply with the requirements of European Directives (Low Voltage and Machines Directive) and are conform to European and international standards.

## DESCRIPTION

SBM/SCM series are realized in aluminium material, therefore they are mechanically more resistant and three times lighter than the ones in zinc alloy. All metal limit switches have a degree of protection IP66.

## INSTALLATION INSTRUCTIONS

In order to obtain the correct operation of the device, please follow the following instructions.

1. Install the switch and secure the fixed end of the rope. Apply tension to the extent the green 0 -ring is visible and the bottom is flush with the end of the red housing. (Fig. 1).
2. Pull the reset pommel in order to close the safety contacts of the limit switch.
3. The contacts inside the limit switch will change their position whenever the rope is pulled or loose its tension.
4. Check the correct operation of the rope switch before you start the machine and periodically.
Performing the role of worker protection, improper installation or tampering with safety devices can cause serious injury to persons.
The installation must therefore be performed in accordance with local legislation and only by authorized personnel. For any question about CE declaration of conformity or for any information and assistance, please contact our technical department

Since 1994，ITC is a trusted resource for industrial electrical and automation components． With over 10000 different parts available from its Toronto area warehouse， ITC provides the perfect blend of dependable stock，quality products， fair pricing，and friendly， knowledgeable service．
